

SkillVerse — Skill Development & Student Management Platform

About The Project

SkillVerse is an educational Flutter app, which allows students to learn and improve their skills, track the development, and demonstrate it to other people. Moreover, the application allows teachers to keep track of the students' skills and approve or reject them.

Problem Statement

Students need a single source to plan, build and demonstrate their skills, and teachers – to review, evaluate and encourage them. SkillVerse puts skill management, evaluation, progress tracking, and student engagement at the center of learning.

Main Features

There are several main features available in the application:

- Differentiated areas for students, teachers, and administrators;
- Students can collect, update, and maintain their skills and development;
- Teachers can examine the students' development and approve/reject it;
- Students can demonstrate their progress and maintain their showcases;
- XP system and levels to encourage students to develop their skills;
- Achievements that are unlocked by certain conditions and XP levels;
- Leaderboards to keep track of the best students and their progress;
- Attendance tracking system for students;
- Notifications about achievements, reviews, attendance, and other things;
- Dashboards to view personal data, including skills, XP, achievements, attendance, leaderboards, and showcases.

Tech Stack

Frontend: Flutter, Dart

Backend / Database: Firebase, Cloud Firestore

Authentication: Firebase Authentication

Details

The application's code is organized into services, including User, Skill, Notification, Achievement, and XP services. These services contain the logic and data related to their specific feature and are unified by the common logic of working with Firebase. Firebase Authentication is used to authenticate users and manage their roles. Cloud Firestore is used to store users' data, including their skills, achievements, notifications, attendance, and other data.

Purpose

The main purpose of the application is to collect and demonstrate students' skills in a competitive manner. The app allows students to continually develop their skills, abilities, and talents and demonstrate this progress to others. Additionally, the application makes it easier for teachers to monitor students' progress and approve their skills.
